DETAILED ACTION

This action is responsive to the application filed June 8, 2006. Applicant's preliminary amendment filed June 8, 2006 has been entered. Claims 5-6 have been canceled. Claims 3-4 have been amended. Claims 1-4 are now pending.

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Method of Diagnosing Feline Odontoclastic Resorptive Lesions using Radiographs"

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 1 recites "a method of diagnosing FORL comprising taking no more than seven radiographic views of teeth from the mouth of a feline animal, wherein at least one view is of each of the mandibular third premolar teeth." There is no positively recited step for "diagnosing FORL" as recited in the preamble, and therefore the claim is indefinite. Claims 2-4 also do not positively recite a step for diagnosing FORL.

Additionally, claim 1 recites the limitation "FORL" in claim line 1. There is insufficient antecedent basis for this limitation in the claim. Acronyms need to be defined in the claim.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ingham et al. (Prevalence of odontoclastic resorptive lesion in a population in clinically healthy cats).

8. Addressing claims 1-4, Ingham discloses diagnosing cats for feline odontoclastic resorptive lesions (FORL) using radiographs. Ingham discloses that FORL Ingham discloses that the most commonly affected teeth were the third mandibular premolars. Ingham screens the cats for FORL using both parallel and bisecting angle techniques.

Ingham uses statistics and graphs to show the presence of FORL (see abstract and "Introduction" sections on page 439, "ORL screen procedure" and "Statistics" sections on page 441, and "Discussion" and "Conclusion" sections on page 443). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to optimize the number of radiographs taken of the cats, including taking no more than two radiographic views of the teeth, to minimize the cat's exposure to x-rays, and still screen for FORL.
